Corrected	

Contract Analysis

🔴 Critical 🟠 Medium ⚪ Minor 🔵 Pass

Severity	Code	Description
🔵	ST	Contract Owner is not able to stop or pause transactions
🔵	OCTD	Contract Owner is not able to transfer tokens from specific address
🔵	OTUT	Owner Transfer User's Tokens
🔵	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
🔵	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
🔵	MT	Contract Owner is not able to mint new tokens
🔵	BT	Contract Owner is not able to burn tokens from specific wallet
🔴	BC	Contract Owner is not able to blacklist wallets from selling

BC - Blacklisted Contracts

Criticality	critical
Location	contract.sol#L684

Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the `manage_blacklist` function.

```
if(blacklistMode){
    require(!isBlacklisted[from] && !isBlacklisted[to],"Blacklisted");
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	CO	Code Optimization
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L07	Missing Events Arithmetic
●	L09	Dead Code Elimination
●	L14	Uninitialized Variables in Local Scope

CO - Code Optimization

Criticality	minor
Location	contract.sol#L714

Description

There are code segments that could be optimized. A segment may be optimized so that it becomes a smaller size, consumes less memory, executes more rapidly, or performs fewer operations.

The contract swaps the tokens to receive ETH twice. Once for the auto generated liquidity pool and once for the sending funds to the team's wallets.

```
swapTokensForEth(halfLiquidityTokens);

uint256 newBalance = address(this).balance.sub(initialBalance);
addLiquidity(halfLiquidityTokens, newBalance);
emit SwapAndLiquify(halfLiquidityTokens, newBalance, halfLiquidityTokens);

initialBalance = address(this).balance;
uint256 totalTokens = balanceOf(address(this));
swapTokensForEth(totalTokens);
newBalance = address(this).balance.sub(initialBalance);

uint256 walletsTotal =
devTokensCollected.add(marketingTokensCollected).add(buybackTokensCollected);

uint256 ethForMarketing =
newBalance.mul(marketingTokensCollected).div(walletsTotal);
uint256 ethForBuyback =
newBalance.mul(buybackTokensCollected).div(walletsTotal);
uint256 ethForDev = newBalance.mul(devTokensCollected).div(walletsTotal);

transferToAddressETH(marketingWalletAddress, ethForMarketing);
transferToAddressETH(buybackWalletAddress, ethForBuyback);
transferToAddressETH(devWalletAddress, ethForDev);
```

Recommendation

Rewrite some code segments so the runtime will be more performant. The contract could swap once the entire amount and distribute the proportional amount.

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L190,195,201,205,209,216,552,556,560,564,573,578,582,587,593,598,603,607,611,615,619,626,643,932,937,941,995,1028

Description

Public functions that are never called by the contract should be declared external to save gas.

```
manualBurn
setSwapAndLiquifyEnabled
includeInFee
excludeFromFee
isExcludedFromFee
excludeFromReward
reflectionFromToken
manage_blacklist
enable_blacklist
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality	minor
Location	contract.sol#L468,466,467,1011,446

Description

Constant state variables should be declared constant to save gas.

```
deadWallet
deadAddress
_symbol
_name
_decimals
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L260,261,277,298,615,619,896,900,976,980,985,990,995,471,474,477,480,483,488,489,490,491,492

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
_saleBuybackFee
_saleMarketingFee
_saleDevFee
_saleLiquidityFee
_saleTaxFee
_buybackFee
_marketingFee
_devFee
_liquidityFee
...
```

Recommendation

Follow the Solidity naming convention.
https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions.

L07 - Missing Events Arithmetic

Criticality	minor
Location	contract.sol#L945,962,976

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
minimumTokensBeforeSwap = _minimumTokensBeforeSwap
_saleTaxFee = taxFee
_taxFee = taxFee
```

Recommendation

Emit an event for critical parameter changes.

L09 - Dead Code Elimination

Criticality	minor
Location	contract.sol#L148,131,135,139,143,111,122,1014

Description

Functions that are not used in the contract, and make the code's size bigger.

```
swapETHForTokens
sendValue
isContract
functionCallWithValue
functionCall
_functionCallWithValue
```

Recommendation

Remove unused functions.

L14 - Uninitialized Variables in Local Scope

Criticality	minor
Location	contract.sol#L620

Description

The are variables that are defined in the local scope and are not initialized.

```
i
```

Recommendation

All the local scoped variables should be initialized.

The domain has been created in almost 3 years before the creation of the audit.

There is no public billing information, the creator is protected by the privacy settings.

Summary

The Smart Contract analysis reported one critical severity issue. The contract owner has the authority to massively blacklist addresses. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats. There is also a limit of max 10% fees.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provide all the essential tools to assist users draw their own conclusions.
